177

Dzus cowl fasteners are used in engine cowling of older aircraft.

Dzus fasteners are designated by letters:

- 1) Type **A** has an **oval head**
- 2) Type **F** and **FA** have a **flush head**
- 3) Type **W** has a **winged head**

The letter **J** added to these symbols indicates that the fastener has **longer undercut below the head**. This allows the fastener to eject or recede from the panel when being attached or removed.

The letter **W** added to the symbol indicates that the **wing is attached to the head**.

The first figure after the letter types indicates the body diameter of the fastener. Special tools are needed to install Dzus grommets.

Our Part Number	Height	Hole Centres	Deflection	Rivet Hole Size
S3-175	0.175	0.625	0.040	3/32
S3-200	0.200	0.625	0.040	3/32
S3-225	0.225	0.625	0.040	3/32
S4-200	0.200	0.750	0.045	3/32
S4-225	0.225	0.750	0.045	3/32
S5-150	0.150	1.000	0.047	1/8
S5-200	0.200	1.000	0.047	1/8
S5-225	0.225	1.000	0.047	1/8
S6-275	0.275			
S6-275	0.300			

All measurements are Imperial.
